INTRODUCTION

The Office of the National Coordinator for Health Information Technology (ONC) is required by statute to perform certain duties in a manner consistent with the development of a nationwide health information technology (health IT) infrastructure that, among other things, allows for the electronic use and exchange of information. ONC is required under section 3001(c)(5) of the Public Health Service Act (PHSA), in consultation with the Director of the National Institute of Standards and Technology, to keep or recognize a program or programs for the voluntary certification of health IT as being in compliance with applicable certification criteria adopted by the Secretary of Health and Human Services (the Secretary) under section 3004 of the PHSA.

The ONC Health IT Certification Program (Program) is a voluntary certification program established by ONC to provide for the certification of health IT to the standards, implementation specifications, and certification criteria adopted by the Secretary. The Program supports the availability of certified health IT for its encouraged and required use under other federal, state, and private programs.

The ONC Certified HIT certification and design mark (Mark), which is displayed below, represents that certain health IT functionality was certified under the Program.¹

Under the Program, certification activities are performed by ONC-Authorized Certification Bodies (ONC-ACBs)² in accordance with the requirements of 45 C.F.R. Part 170, Subpart E.

CHARACTERISTICS REPRESENTED BY THE MARK

An authorized user's use of the Mark represents that the health IT has been:

1. Tested by an ONC-ATL in accordance with test tools and test procedures approved by the National Coordinator² or evaluated by an ONC-ACB for compliance with a conformance method approved by the National Coordinator; and

¹ ONC CERTIFIED HIT and Design and the ONC Certified HIT composite logo are certification marks of the U.S. Department of Health and Human Services (DHHS). The rainbow and star design logo is a service mark of DHHS.

² ONC-ACBs are certification bodies authorized by ONC to conduct certification under the Program.

³ Test tools and test procedures approved by the National Coordinator can be accessed through the main ONC Health IT Certification Program webpage at www.healthit.gov/policy-researchers-implementers/onc-health-it-certification-program. Test tools and test procedures are approved for each adopted edition of certification criteria.

⁴ Adopted standards and implementation specifications can be found at 45 C.F.R. Part 170, Subpart B. Adopted certification criteria can be found at 45 C.F.R. Part 170, Subpart C. Requirements of the Program can be found at 45 C.F.R. Part 170, Subpart E.

2. Certified in accordance with:

- a. Adopted standards, implementation specifications, and certification criteria; and
- b. Requirements of the Program.⁴

AUTHORIZED USE OF THE MARK

This document contains a series of guidelines that help ensure proper use of the Mark. The terms of use within this document are intended for the exclusive use of authorized users who wish to use or display the Mark.

ONC administers use of the Mark. ONC-ACBs, on behalf of ONC, may grant permission to health IT developers to use the Mark consistent with the criteria and terms herein and in conjunction with health IT that is certified under the Program.

The Mark may only be used:

- With the permission of an ONC-ACB;
- In conjunction with health IT that has been certified under the Program; and
- According to the usage guidelines included in this terms of use document.

An authorized user may reproduce and display the Mark on its website as well as in marketing materials, communications statements, and other assertions related to certified health IT products, subject to the following conditions and limitations:

Full Compliance

The Mark can be used to certify modules complying with various editions of the certification criteria. Since health IT developers can update applicable certification criteria individually, a health IT module can be certified to individual 2015 Edition Cures Update criteria without yet meeting the full compliance requirements for use of the “2015 Edition Cures Update” Mark. In such cases, the module *cannot* be designated with the “2015 Edition Cures Update” Mark and will remain designated with the “2015 Edition” Mark until it is certified to *all* eligible and applicable criteria required under ONC’s 21st Century Cures Act Final Rule. The “2015 Edition Cures Update” Mark will *only* be issued to a developer once it completes all the requirements for updates within the scope of its certification.

Placement

The Mark should be displayed so that it is clear that it is associated with the particular certified Health IT Module(s), or products of which the Health IT Module is a part, that it covers. At a minimum, the Mark must not be displayed in a manner that causes confusion regarding the Health IT Module(s) or product being referenced or the nature of the certification for that Health IT Module(s) or product. For example, the Mark must not be displayed above a list containing products for which some do not have certified Health IT Module(s). Similarly, when accompanied by text referring to a particular edition of certification criteria (e.g., 2015 Edition or 2015 Edition Cures Update), the Mark must not be displayed in connection with products that do not contain Health IT Module(s) certified to that specific edition.

Accompanying Text

The Mark may either be displayed “as is” (i.e., without any accompanying text) or accompanied by text referencing the edition of the certification criteria (e.g., 2015 Edition or 2015 Edition Cures Update) to which the relevant product(s) has been certified. No other text may accompany the Mark.

Accompanying text must be positioned either below or to the right of the Mark, and never above or to the left of the Mark. For instance, the following Marks and accompanying text would be acceptable for use with all products which contain(s) Health IT Module(s) certified to the 2015 Edition and 2015 Edition Cures Update certification criteria, respectively:

Accompanying Marks, Logos, and Symbols

The Mark may be accompanied by or displayed alongside one or more of the following:

- The relevant ONC-ACB’s certification mark, logo, or other identifying symbol; or
- The relevant health IT developer’s company mark, logo, or other identifying symbol.

However, the Mark’s dimensions must be no less than 75% of the width and no less than 75% of the height of any such accompanying mark, logo, or symbol. The following examples illustrate these requirements³:

The Mark must not be combined with the name of any licensee or third-party product, program, or service to create a composite Mark. The Mark must not be adulterated by combining it into a composite with marks owned by others, or otherwise modifying it from the form ordinarily used in commerce and/or as registered in the U.S. Patent and Trademark Office.

Attribution Statement

The use of the Mark must include an attribution statement crediting ownership of the Mark to the legal owner, the United States Department of Health and Human Services (HHS). The attribution statement for the Mark is “ONC CERTIFIED HIT[®] is a registered trademark of HHS.” Typically, the attribution statement is displayed at the end of the material, in the footer of the document, or on the back of the package.

Other Requirements and Guidelines

Graphical Design Elements and Text

The Mark’s graphical design elements and text may not be altered in any way not explicitly stated in this document.

Clear Space

³ Please note that other sequences of the Mark are acceptable but are not illustrated in this document.

The clear space on the left, bottom, and right of the Mark must be at least equal to the x-height of the tallest letter.

Minimum Size

The size of the Mark will affect legibility and overall impression, thus the Mark must always be sized as specified in these guidelines. For print, the minimum size of the Mark must not be smaller than two inches wide. For posting on the internet, the minimum size of the Mark must not be smaller than 200 pixels wide.

Incorrect Usage

In order to maintain the integrity of the Mark, it is essential that the Mark be used correctly, which means a user must:

- Always use the Mark as provided and the logo must always appear.
- Not alter the position of the Mark elements.
- Not alter the aspect ratio of the Mark.
- Not stretch or distort the Mark.
- Not alter the color of any of the Mark elements.
- Not use any of the Mark elements to create a new mark or graphic.
- Not use the Mark on background colors, images, or other artwork that interfere with the legibility of the Mark.
- Not rotate the logo or any of its elements.

Preferred Color Palette

The user should utilize the following color palette for identity program components on all graphic communications materials. The user should match the indicated colors as closely as possible using the following guidelines:

- For four-color process printing (also known as full-color printing), refer to the CMYK values indicated.
- For software like Microsoft Word® or Microsoft PowerPoint®, refer to RGB (print/onscreen).
- For web applications, refer to the RGB web values or hexadecimal web values.
- For printing on coated and uncoated paper, use the PANTONE® and CMYK values provided.

Distinguishing the Mark in a Non-Stylized Form

When the Mark is used in a non-stylized form, such as in the body text of an advertisement, it should be set apart and distinguished from the other words in the text. In order to do this, the Mark may be rendered in **boldface** type, *italics*, CAPITAL LETTERS, underscoring, set in “quotation marks” or followed by an asterisk(*). Often times, the best identification may be a footnote identifying the registered status of the Mark.

MISUSE OF THE MARK

ONC-ACBs, and health IT developers who use the Mark, are required to inform ONC immediately of any suspected misuse of the Mark. Health IT developers are required to cease use of the Mark immediately should its health IT Module’s certification become suspended or withdrawn by an ONC-ACB, or terminated by ONC.

PROCEDURES FOR RESOLVING DISPUTES

If an ONC-ACB believes that a health IT developer is misusing the Mark, it should notify the health IT developer of its concerns. If the health IT developer is no longer under contract with the ONC-ACB (due to a withdrawal), the ONC-ACB should make an attempt to work directly with the health IT developer to cease use. If the developer is non-responsive or unwilling to cease use of the Mark, the ONC-ACB should notify ONC immediately.

If the health IT developer is still under contract with the ONC-ACB, the two parties should alert ONC to the suspected misuse of the Mark but should attempt to resolve the dispute without ONC input. However, if the attempt at resolution is unsuccessful, the ONC-ACB should issue a non-compliance notification to the health IT developer. The non-compliance notification should specify the ONC-ACB's reasons for the notification and request that the health IT developer respond to and correct the alleged violation or be subject to having its permission to use the Mark rescinded by the ONC-ACB.

If the health IT developer remains non-compliant and the ONC-ACB rescinds the health IT developer's permission to use the Mark, the health IT developer may appeal the decision to ONC. The health IT developer has 15 calendar days from receipt of the ONC-ACB's written determination to file an appeal with ONC. The appeal should include, in writing, the ONC-ACB's decision to rescind use of the Mark, the health IT developer's reasons for appealing the ONC-ACB decision, and any relevant supporting documentation. A health IT developer may file its appeal by sending an email with the required information to ONC.Certification@hhs.gov with the subject line "Appeal of ONC-ACB's Certification Mark Decision."

ONC will, as necessary, contact the health IT developer, ONC-ACB, and any other relevant party to obtain information pertinent to the appeal. ONC will make a final decision based on the information initially submitted by the health IT developer and any information obtained by ONC since the filing of the appeal. A timely written decision will be issued based on the circumstances. The decision will not be subject to further review.

A decision by ONC to uphold an ONC-ACB's decision to rescind permission to use the Mark would not preclude a health IT developer from seeking permission to use the Mark in the future as long as the health IT developer complies with the Mark's terms of use. However, egregious or continued misuse of the Mark may result in a sustained prohibition of its use and other appropriate legal recourse.
